Ciba® XYMARATM product range –
A versatile palette of solutions for the plastic industry

Ciba® XYMARATM XPS Anti-yellowing grades

Conventional titanium dioxide coated pearl pigments often have the tendency to accelerate the oxidation of the phenolic antioxidants in polyolefins. This results in the production of a yellowish shade which can lead to unwanted coloration changes in your valuable end products.

With the new XYMARATM XPS series, Ciba offers unique XYMARATM Pearl pigments with very high resistance to yellowing, ease-of-use and excellent processing properties. The first products in this series:

XYMARATM Silver Pearl XPS19
XYMARATM Silver Pearl XPS23

are immediately available.
